Define all colors as CMYK:

Convert all RGB and Pantone PMS spot colors to CMYK process before producing the final PDF. Note: To maintain color quality, please convert all PMS Match, Spot, RGB or Lab colors to CMYK process in the native application or as far upstream as possible.

Do not save TIFF or EPS files with embedded color management profiles or use RGB, LAB or ICC-based profiles, because during the conversion process, a color shift can happen with undesirable results.

Maximum ink density:

The total ink density (combination of CMYK percentages) should not exceed 300 percent.
